

The BioAnalytics Group LLC

BioPathwise®

BioAnalytics' flagship technology for pathway-centric biological research

BioPathwise is a computer-based solution designed to allow biologists to organize and view their data and knowledge in the form of pathways. The system includes a pathway-centric data repository, integrated with powerful tools for interactive pathway creation, database search, data analysis, simulation, and publication of annotated pathways.

BioPathwise is currently deployed as part of a major NIH program to rapidly characterize unknown pathogens, and is in use by research groups at universities and large pharmaceutical companies. It is available for online purchase at our website, www.bioanalyticsgroup.com
